Experiment 9

IPC Using Shared Memory

```
#include <stdio.h>

#include <stdlib.h>

#include <string.h>

#include <sys/ipc.h>

#include <sys/shm.h>

int main(void) {

   int id = shmget(IPC_PRIVATE, 1024, IPC_CREAT | 0600);

   char *ptr;

   if (id == -1) { perror("shmget"); return 1; }

   ptr = (char *)shmat(id, NULL, 0);

   if (ptr == (char *)-1) { perror("shmat"); shmctl(id, IPC_RMID, NULL); return 1; }

   strcpy(ptr, "Hello, shared memory!");

   printf("Data in shared memory: %s\\n", ptr);

   if (shmdt(ptr) == -1) perror("shmdt");
```

```
    if (shmctl(id, IPC_RMID, NULL) == -1) perror("shmctl");

    return 0;

}
```

Output:
